

Arman Hosseini

Developed an early interest in programming during middle school by building hobby projects in Python. Since then, have built a strong foundation in computer science, including operating systems, compiler development, and cloud computing. Currently expanding expertise in networking and operating systems to further deepen systems-level knowledge.

Experience

Research Assistant @ Sharif University of Technology

Nov 2025 – Present

Currently conducting research in real-time operating systems and embedded systems, with a primary focus on ROS2 (Robot Operating System 2) and its scheduling mechanisms.

Head Teaching Assistant @ Amirkabir University of Technology

Jan 2025 – Jun 2025 (6 month)

Served as Head Teaching Assistant for the Advanced Programming course at Amirkabir University of Technology (AUT), leading the adoption of a document-based approach to teaching Java development. Produced 700+ pages of educational material and assignments covering Java, Git, and database management, receiving highly positive feedback from students and faculty. The complete materials are available [here](#).

.NET Developer @ System Group | همکاران سیستم

Oct 2023 – Jan 2025 (1 year 4 month)

Worked in the Supply Chain Management team at [System Group](#), Iran's leading ERP company. Contributed to the development of a SaaS-based supply chain management solution later adopted by major enterprises. The service is currently available [here](#).

Education

Amirkabir University of Technology

Bachelor's degree, Computer Science

Sep 2022 – Jun 2026

Important Grades

- **Advance Programming:** 20/20 (A)
- **Principles of Operating Systems:** 18.5/20 (A)
- **Principles of Computer Systems:** 20/20 (A)
- **Computer Networks:** 18/20 (A)

National Organization for Development of Exceptional Talents (Sampad)

High School Diploma, Mathematics

Sep 2016 – Jun 2022

Personal Projects

XV6 Operating System

Extended the MIT-developed educational operating system `xv6` by implementing superpage support, copy-on-write `fork`, and the `mmap` system call. This ongoing project explores various aspects of operating system design through hands-on feature implementation, each addition offering unique challenges that deepen understanding of OS internals. The modified OS and contributions are available in this [repository](#).

Personal Blog

I recently developed my personal blog along with a custom static site generator written in Go. I haven't published any posts yet, but I plan to write a few by the end of the year to share what I've learned. You can check out the current version [here](#).
